

CUMMINS-ALLISON INTRODUCES HIGH-SPEED CHECK ARCHIVE SOLUTION

The JetScan iFX i100 scans and digitally stores check images 100 percent faster than any other desktop device

JUNE 14, 2011—MT. PROSPECT, IL—[Cummins-Allison](#), the leading innovator and provider of coin and currency handling solutions, today introduced the JetScan iFX™ i100 check archive solution. The desktop device scans and digitally stores check images at a rate of 400 checks per minute—eliminating the need to copy and store physical checks. Organizations currently photocopying, microfilming or using a desktop check imager can experience significant time savings with this groundbreaking technology—check images are scanned and digitally stored 100 percent faster than any other desktop device.

The JetScan iFX i100 sets new industry standards for processing speed; capturing 400 two-sided check images per minute. Capable of scanning business and personal checks, the i100 instantly transfers check images to an electronic database for easy recall. Check images are cataloged based on a variety of data points and MICR-line data. The i100 also comes standard with a currency scanning and counting feature at an industry-leading rate of 1,600 notes per minute.

Cummins-Allison President Doug Mennie said, “This new product is another milestone in our long tradition of developing game changing technology. The addition of check scanning solutions to our portfolio lets our customers realize additional efficiencies and cost savings.”

The i100 is part of Cummins-Allison revolutionary iFX document imaging platform, which features advanced currency and check processing capabilities. With the JetScan iFX, documents are processed quicker, accurately and with fewer stops for unmatched productivity.

According to Mennie, the JetScan iFX product line will continue to get more exciting. “This new technology paves the way for the ultimate in deposit processing. With a single machine that images and processes currency and checks companies can streamline Accounts Receivable functions and reduce deposit processing costs.”
